

How to install packages in python (version 3.10),version 1.0
peter.vlasschaert@gmail.com,19/09/2022

see: also : ref

new: 18/09/2022:python : How install : jupyter notebook (version python from your choice),1.0

new: 19/09/2022:python : How install : jupyter notebook (version python from your choice),1.0a

best way : install package commamd prompt

1e) python installation where find : see ref

python directory :3.10 version > sub directory scripts

install directory rem folder (yellow :default)

C:\Users\science\AppData\Local\Programs\Python\Python310\

2e) How to install packages

C:\Users\science\AppData\Local\Programs\Python\Python310\Scripts

edit

delete :C:\Users\science\AppData\Local\Programs\Python\Python310\Scripts

rem : command prompt

cmd.exe

rem : result

C:\Users\science\AppData\Local\Programs\Python\Python310\Scripts>

type after prompt : command window > package you want install

syntax :pip install package

rem : install package matplotlib

type : pip install matplotlib
