click : Command prompt  
output : c:\Users\computernam>

II) step : path  
-----

c:\Users\computernam>python --version

rem :execute > c:\Users\computernam>python  
reason :already installed because this is  
part of a other software.

-----  
before : install  
-----

folder : (Menu : file,computer,view,...)  
goto : view -> show hidden files (= visible)

-----  
1e step : install (python release : windows system)  
-----

<https://www.python.org/downloads/release/python-3107/>  
select :windows 64 ( other see website)  
rem : select python version compatible with your (system)  
rem : description = Recommended  
install: estup  
-----

Install Python 3.10.7(64-bit)  
-> Install Now  
C:\Users\science\AppData\Local\Programs\Python\Python310

check : Install launcher for all users( Make active)  
check : Add Python 3.10 to PATH ( Make active)

2e) step : install jupyter notebook.

-----  
a) directory : scripts

-----  
edit

C:\Users\science\AppData\Local\Programs\Python\Python310\Scripts  
delete rem : "delete sting above in the folder "  
cmd.exe rem : " command prompt ",black window with white letters  
rem : <output : command prompt >

b) instal :notebook  
-----

Microsoft Windows [Version 10.0.19043.2006]

(c) Microsoft Corporation. All rights reserved.

Microsoft Windows [Version 10.0.19043.2006]

(c) Microsoft Corporation. All rights reserved.

C:\Users\science\AppData\Local\Programs\Python\Python310\Scripts>

after scripts: type >

pip install notebook

c) put one of this file in the browser (some will work)

-----  
To access the notebook, open this file in a browser:

file:///C:/Users/science/AppData/Roaming/jupyter/runtime/nbserver-10716-open.html

Or copy and paste one of these URLs:

http://localhost:8888/?token=7ff32506930816a2d606ecc240ad4bbd105999ba0d4f2563

or http://127.0.0.1:8888/?token=7ff32506930816a2d606ecc240ad4bbd105999ba0d4f2563

d) to remove notebook.

-----  
same as above : c)

Microsoft Windows [Version 10.0.19043.2006]

(c) Microsoft Corporation. All rights reserved.

C:\Users\science\AppData\Local\Programs\Python\Python310\Scripts>

type after prompt : pip install pip-autoremove

rem : same prompt

C:\Users\science\AppData\Local\Programs\Python\Python310\Scripts>

type after prompt : pip-autoremove jupyter -y

-----  
rem : science : computername , may be different on your system.

example : version of python

-----  
C:\Users\science\AppData\Local\Programs\Python\Python310>python --version

output : command window (black window)

Python 3.10.7
