

How install : jupyter notebook (version python from your choice),windows 10
peter.vlasschaert@gmail.com,18/09/2022

a) check verion in your path of python

1e step : cmd.exe

Type here to search > cmd
click : Command prompt
output : c:\Users\computername>
2e step : path

c:\Users\computername>python --version

rem :execute > c:\Users\computername>python
reason :already installed because this is
part of other software

b) install jupyter notebook on your version python.

> directory of your python version.

rem : c:\python\python39> python.exe (python :alreday installed)

otherwise : website of python first installed your version.

1e)step : cmd.exe

c:\Users\computername>

2e)step :change directory

c:\Users\computername>cd..
C:\Users>cd..
cd python
cd python39
output : C:\Python\Python39>
cd scripts
output : C:\Python\Python39\Scripts>

3e)step : two ways, try (install jupyter notebook)

C:\Python\Python39>pip install notebook
or
C:\Python\Python39\Scripts>pip install notebook

4e)step : How start notebook "see above"

rem :exe for notebook inside > script directory >
C:\Python\Python39\Scripts>jupyter notebook
result : will start in your browser : example (firefox...)

best way : to start up : short cut of exe inside :script
directory

> jupyter-notebook.exe

rem : select : exe > rhs button > create short cut
copy to your desktop,click : open the notebook.
